# Global Positioning System GPS

Peter H. Dana 9/22/98

**GPS Nominal Constellation**  
**24 Satellites in 6 Orbital Planes**  
**4 Satellites in each Plane**  
**20,200 km Altitude, 55 Degree Inclination**

# GPS Satellite

**The Macrometer V1000 --  
the first GPS receiver owned  
by NOAA!!**

**The GPS Pathfinder –  
puts a whole new spin on  
WHEN and WHERE!!**

**GPS Pathfinder**

**The world's first\*  
wristwatch with  
built-in GPS  
navigation  
capabilities.**

\* According to CASIO data as of April 1999

The new **GPS PATHFINDER** is the world's first wristwatch designed to receive and process data from the Global Positioning System (GPS) satellites that ring the globe. Made

*Positioning America for the Future*

# Standalone Positioning: Since May 1, 2000

- C/A Code on L1
- No Selective Availability

# PSEUDORANGE FROM CODE DATA

# Standalone Positioning: By 2011

- C/A Code on L1
- L2C Code on L2
- New Code on L5

# GPS ERROR SOURCES

- \* Receiver clock error
- \* Satellite clock error
- \* Satellite orbit error
- \* Ionospheric delay
- \* Neutral atmosphere delay
- \* Multipath
- \* Receiver noise

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION  
National Ocean Service  
National Geodetic Survey

*Positioning America for the Future*

## IONOSPHERE

The Ionosphere delay is (Inversely) proportional to the frequency of the radio-waves. Thus the delay can be calculated by measuring the difference in the travel times for the two frequencies

The refraction (slowing) of the GPS signal as it passes through the atmosphere can alternatively be viewed as an increase in path length: called the "path delay" and with units of distance

## TROPOSPHERE

The troposphere slows both GPS frequencies equally. This means the tropospheric delay must be modeled as a free parameter in the GPS processing

actual tropospheric path length

Excess path length

# GPS Signal Delays Caused by the Atmosphere

TOTAL  
ATMOSPHERIC  
DELAY

IONOSPHERIC  
DELAY

⇒ TEC

TROPOSPHERIC  
DELAY

HYDROSTATIC  
DELAY

WET  
DELAY ⇒ IPWV

# Signal Multipath

Figure 1  
Multipath Description

August 1987 -Ionospheric refraction and Multipath Effects in GPS Carrier Phase Observations  
Yola Georgiadou and Alfred Kleusberg  
IUGG XIX General Assembly Meeting, Vancouver, Canada

# DIFFERENTIAL GPS POSITIONING

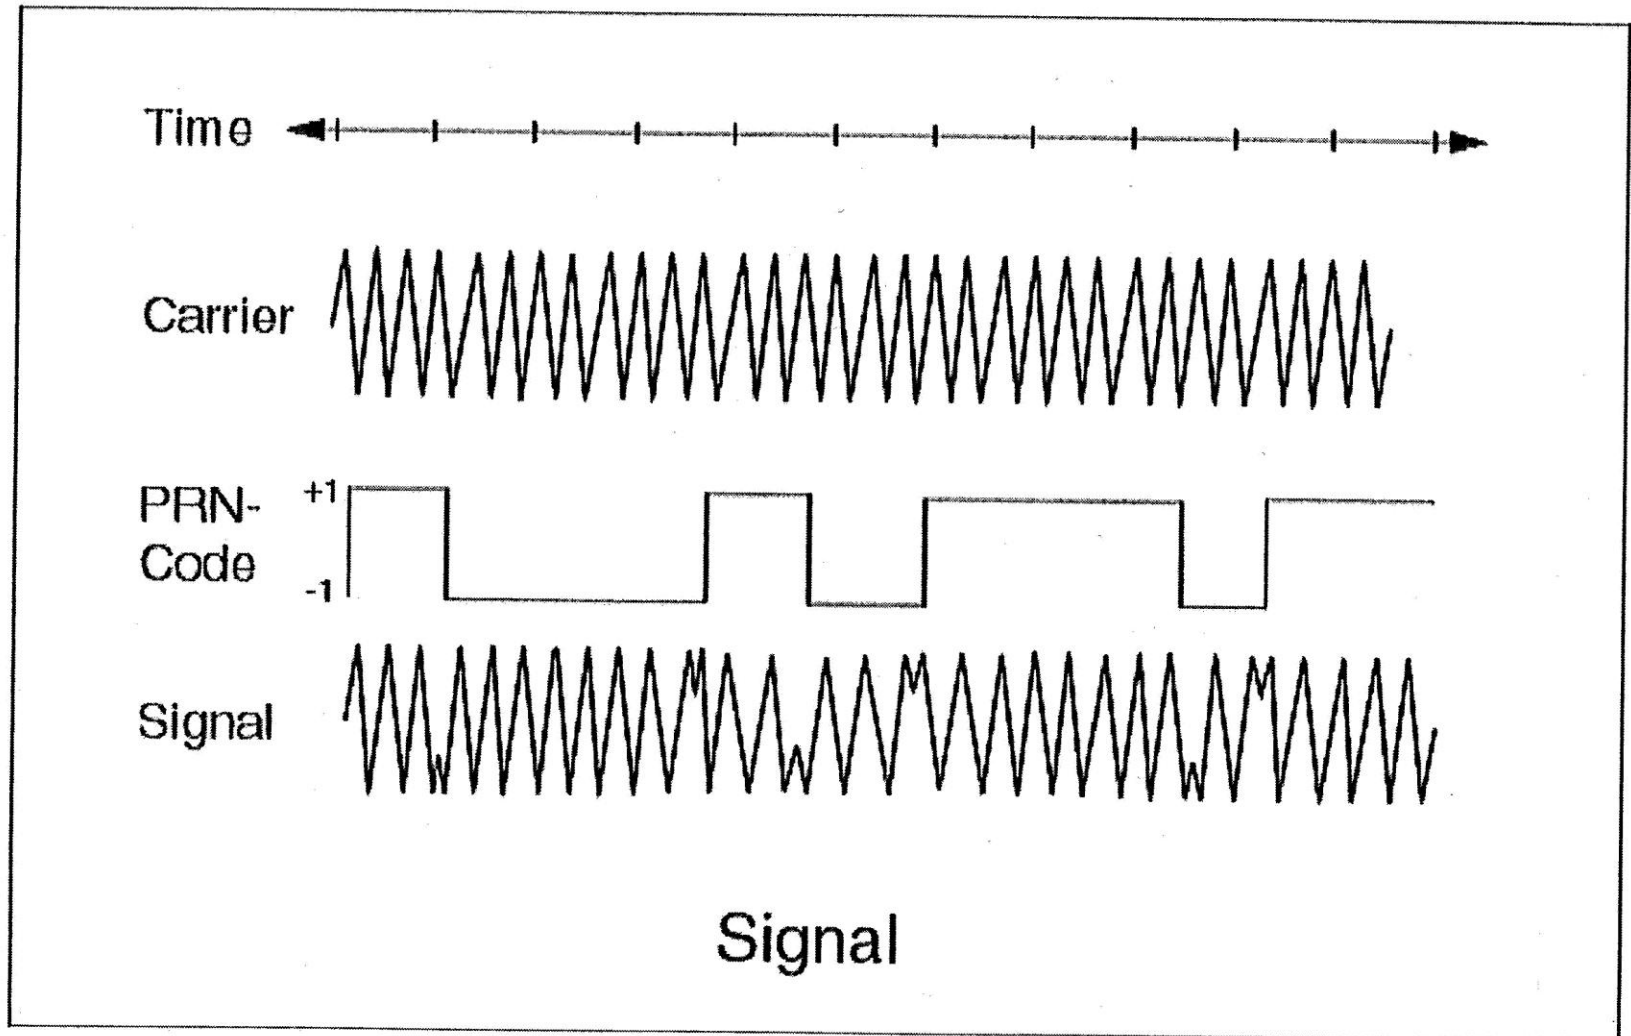

# Real-Time Kinematic: Today

- L1 Code and Carrier
- L2 Carrier
- Data Link

# CARRIER MODULATION

# Real-Time Kinematic: Tomorrow

- L1 Code and Carrier
- L2 Code and Carrier
- L5 Code and Carrier
- Data Link

# HOW TO ACHIEVE CM-LEVEL ACCURACY FOR BASELINES LONGER THAN 25 KM

- \* OBSERVE FOR SEVERAL HOURS
- \* USE DUAL-FREQUENCY RECEIVERS
- \* POSTPROCESS GPS DATA WITH  
SOPHISTICATED SOFTWARE
  - USE “PRECISE” IGS ORBITS
  - SOLVE FOR INTEGER AMBIGUITIES
  - SOLVE FOR TROPO DELAYS

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

GPS data from a Cooperative CORS site is available from the participating agency.

By clicking the GET DATA button above, you will leave NGS and be directed to that agency.

Done

# CORS SITES

# CORS SITES

# CORS OVERVIEW

- Network contained 1154 sites as of Jan. 2007
- Growing at rate of 15 sites per month
- More than 185 organizations participate in the CORS program
- Provides code range (C/A, P1, P2)
  - and carrier phase observations (L1, L2)

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION  
National Ocean Service  
National Geodetic Survey

*Positioning America for the Future*

# CORS APPLICATIONS

- Postmission Static Positioning (few cm-level accuracy **with 15minutes of data**, few dm-level accuracy with one minute of data)
- Postmission Kinematic Positioning (dm-level accuracy for an aircraft, a boat, or a land vehicle)
- Geophysics / Crustal Motion
- Meteorology / Water Vapor in Atmosphere
- Space Weather / Free Electrons in Ionosphere

# NATIONAL CORS NETWORK

- National CORS network contains 988 sites whose data are available directly from NOAA's National Geodetic Survey in Silver Spring, MD
- GPS data stored in RINEX format
- Data made available to public via:
  - World Wide Web
  - File transfer protocol
- Currently 13 years of CORS data are online for immediate access
- Parallel CORS Data Facility being operated by NOAA's National Geophysical Data Center in Boulder, CO

# COOPERATIVE CORS

- GPS base stations whose data are freely disseminated by cooperating organizations
- NGS provides link from its web site to that of each cooperating organization
- Site coordinates must be consistent with the National Spatial Reference System

# COMBO CORS

- The term “Combo CORS” designates a station whose GPS data is distributed both by NOAA and by a cooperating organization.
- Such accessibility to CORS data is highly desirable.
- Scripps Institution of Oceanography (LaJolla, CA) distributes data for 900+ sites in the CORS network.

# Civil GPS Use

**Power Grid  
Interfaces**

**Satellite Ops --  
Ephemeris,  
Timing**

**Personal Navigation**

**Surveying &  
Mapping**

**Trucking &  
Shipping**

**Communications --  
Network  
Synchronization  
and Timing**

**Aviation**

**Recreation**

**Railroads**

**Fishing &  
Boating**

**Off shore  
Drilling**

# Consumer/Recreational

- **\$3.8B market by 2003**
- **Portable receivers for fishermen, hunters, campers, hobbyists, etc.**
- **Recreational facilities**
- **Estimated 40M potential users in the U.S. alone**
- **Highly elastic demand**
- **Integration of GPS into cellular phones expected to generate huge volume**

# Future GPS User Sectors - \$M

(Freedonia Group Report - 1997)

# Precision Agriculture

**LAWRENCEBURG, TENNESSEE CORNFIELD**

THE OWNER DREW THE PICTURE ON HIS COMPUTER, DOWNLOADED IT TO HIS GPS,  
THEN FOLLOWED THE GPS ON HIS BUSH HOG

# Timing Applications

- Some estimate the timing market at \$40-100M
- Communications network synchronization and management
  - Phone, wireless systems
  - LANs, WANs, Internet
- Power grid management and fault location
- Financial transactions
- E-commerce signatures

# CORS Applications

Topography

# *LIDAR images of Manhattan before and after 11 SEP 2001*

These images are computerized visualizations of elevation information of the World Trade Center from before (July 2000) and after (September 15, 2001) the attack. These maps were produced using an airborne LIDAR (Light Detection and Ranging) system. The LIDAR system creates detailed and highly accurate elevation information by the precise timing of thousands of laser pulses striking the ground surface. These data can be manipulated in the digital environment to create an array of maps and views of the project site and to obtain precise measurements of structures, debris fields, and other vital information. These images were generated by EarthData ([www.earthdata.com](http://www.earthdata.com)), and the aircraft was positioned using CORS data from the NJI2 site which is operated by the New Jersey Institute of Technology.

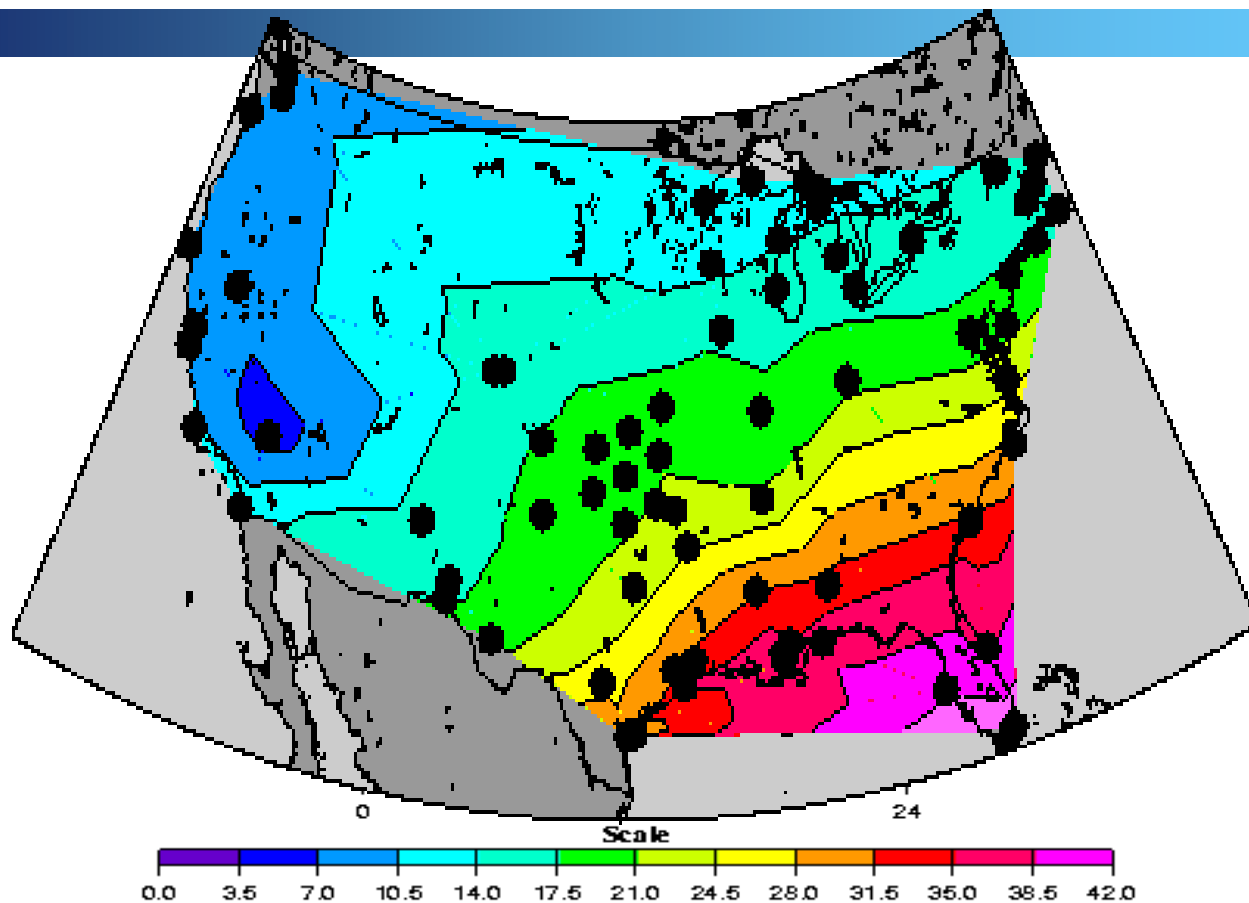

# Hourly Forecast of Precipitable Water
